

BOP SAFETY INTERLOCK

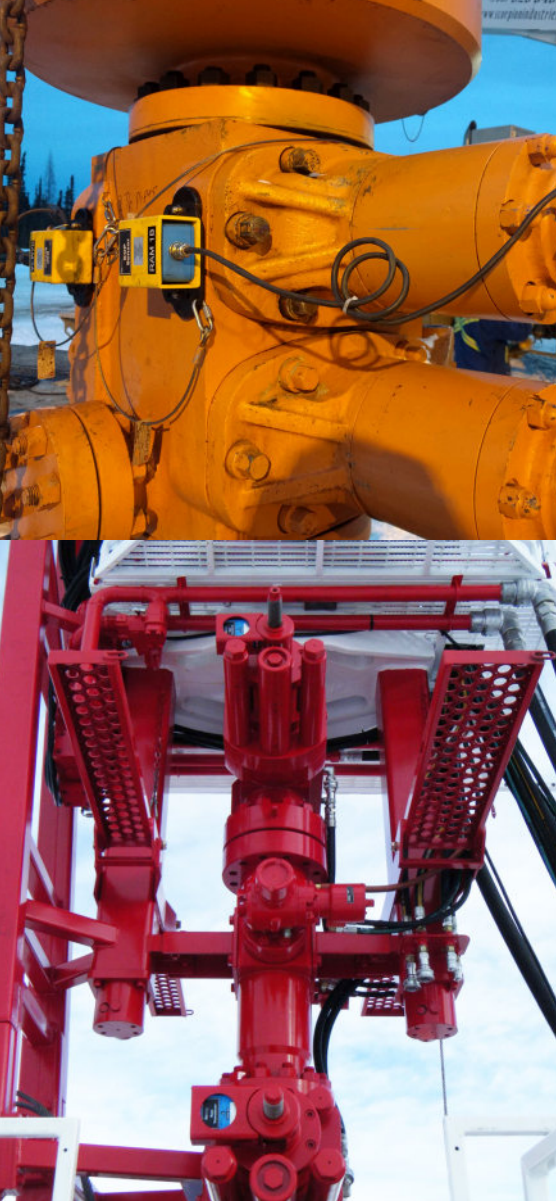

Custom-mount the Rigsmart BOP transducer to fit any BOP stack, to help ensure a safe work environment and prevent damage to the pipe.

Protect your crews and equipment.

RIG SMART

SYSTEMS

BOP SAFETY INTERLOCK

- Rigsmart wireless sensors are mounted directly on the polish rods of the BOPs to determine ram position.
- A warning is given to the driller with either LED light indicators or through a Rigsmart user interface when the BOPs are closed.
- BOP data is integrated into the Rigsmart DAS system if present. This data can then be used for visualization of the operation for the driller and creating historic logs of rig activity.
- A throttle override prevents pulling against closed rams.
